C. Project Description

Project Type: ☐ New Construction ☒ Modification ☐ Remediation ☐ Other

Total number of sources in project: 0

Description of project: B. Braun is submitting this RFD at the request of PADEP. This RFD concerns the installation at the facility of a dry bed air cleaning device to reduce ethylene oxide emissions from the existing back vents of the sterilization chambers. The installation of the dry bed does not result in any new emissions or the increase of any existing emissions (and therefore would not result in any increased ambient air quality impact for any pollutant), and instead only results in the reduction of emissions. In addition, the installation of the dry bed is not required by any existing regulatory or permit-based standard.

Source Description: B. Braun is submitting this RFD at the request of PADEP. This RFD concerns the installation at the facility of a dry bed air cleaning device to reduce ethylene oxide emissions from the existing back vents of the sterilization chambers. The installation of the dry bed does not result in any new emissions or the increase of any existing emissions (and therefore would not result in any increased ambient air quality impact for any pollutant), and instead only results in the reduction of emissions. In addition, the installation of the dry bed is not required by any existing regulatory or permit-based standard. Rather, the applicable NESHAP regulation, 40 CFR Part 63, Subpart O, exempts the back vents of the sterilization chambers from control requirements. In addition, B. Braun has not and will not rely on emission reductions from the dry bed installation to generate emission reduction credits.
